The diagram illustrates the Floyd-Warshall algorithm for finding shortest paths in a graph with 8 nodes. The top row shows the initial distance matrix with 'R' for infinity and 'D' for distance. The bottom row shows the matrix after several iterations, with red and yellow annotations indicating updates and path tracking. A large blue arrow at the bottom points to the right.

The image shows two handwritten diagrams illustrating the reduction of a 2x2 matrix to a 1x1 matrix using row and column operations.

**Left Diagram:** A 2x2 matrix is shown with the top-left element 0 and the top-right element R. The top row is circled in yellow. An arrow points from the top-right element R to the bottom-right element R. Below the matrix, the bottom row is labeled R, and the bottom-right element is labeled R.

**Right Diagram:** A 2x2 matrix is shown with the top-left element 0 and the top-right element R. The top row is circled in red. An arrow points from the top-right element R to the bottom-right element R. Below the matrix, the bottom row is labeled R, and the bottom-right element is labeled R. The entire diagram is crossed out with a large red 'X'.
